

Battery-powered compact GPS asset trackers

It's everything you wanted. And more than you expected.

For years our customers told us exactly what they were looking for in an asset tracking device. Rugged. Water-proof. Durable. Dependable. Easy to use.

We listened. And we're pretty sure we nailed it. The AssetView line of cellular GPS tracking devices is designed for non-powered, exposed

assets, where long battery life is essential, using standard batteries. They're IP67 certified, for years of tough service. And you only pay when the device is in service.

- No long term contract
- Pay-as-you-go subscription
- Deactivate and reactivate with no penalty

An Industry First Technology Achievement

AssetView is a revolutionary advanced tracking and asset security solution, combining the most powerful telemetry technologies in an easy to use product. It features dual GPS and GLONASS positioning, for faster, more accurate locations by utilizing twice as many satellites as traditional GPS devices.

AssetView™ Mid shown

TruTrace Adaptive Tracking, only from DPL Telematics.

Our proprietary TruTrace Adaptive Tracking technology enables the accelerometer and GPS to intelligently calculate if an asset is moving,

and increase the rate of live updates. It will automatically scale down the updates to once per day if the asset becomes stationary.

IP67 Rated for Rugged Performance

The AssetView's housing is made of sturdy ABS polycarbonate plastic, UV-stabilized and able to survive years of extreme exposure. And its low-profile makes it easy to install.

Wire-Free Installation

Simply secure the device in the asset, and begin true "hide and track" implementation.

3D Accelerometer

The 3 axis accelerometer allows the AssetView to 'sleep' in an ultra-low power state, but wake-up when it detects movement, collisions or other extreme g-force events.

Recovery Mode

You can change the AssetView settings remotely to activate Recovery Mode, for more frequent position updates.

BYOB (Bring Your Own Batteries)

All three of the AssetView models shown below use standard alkaline, lithium or LTC batteries, readily available at supermarkets, hardware stores and online. No need to stock or wait for proprietary batteries.

Security Is Built-in

All AssetView models use bank-level AES-256 device authentication and data encryption, to ensure that your data is kept private and secure.

Keep Your Assets in View

Our intuitive web software delivers easy tracking and reporting. Quickly setup alerts for geofence, low-battery, curfew and movement. Switch to Recovery Mode and keep tabs on all your assets right from your iOS or Android device.

avmini

The AssetView Mini is the smallest battery powered GPS tracker on the market, but packs big performance.

- Small enough to fit in your pocket
- Up to 6 months battery life with TruTrace Adaptive Tracking
- Up to 2.5 years battery life with daily reporting
- Uses 3 AAA batteries
- Dimensions: 3.3" x 2.5" x 0.94"

avmid

Our base model is anything but basic. It's the perfect blend of compact size and long battery life.

- Track anything from trucks and trailers to equipment
- Up to 1 year battery life with TruTrace Adaptive Tracking
- Up to 3.5 years battery life with daily reporting
- Uses 3 AA batteries
- Dimensions: 5.4" x 2.8" x 1.2"

avmax

When you need maximum performance and battery life, the AssetView Max is ideal.

- Up to 9 years battery life with daily reporting or up to 5 years with updates every 90 minutes
- Up to 2 years battery life with TruTrace Adaptive Tracking
- Magnetic tamper detection
- Bluetooth gateway functionality
- Uses 2 D LTC batteries
- Dimensions: 8.8" x 3.6" x 1.6"

A solution for every asset. Always with our money-back guarantee.
