The AssetView™ family are rugged, waterproof, cellular GPS tracking devices designed for tracking non-powered, exposed assets where long battery life is essential.
A Tracking Solution for Every Asset

**AssetView™ Mini**
The smallest battery powered GPS tracker on the market

- Small enough to fit in your pocket
- Compact and completely portable
- Up to 6 months battery life on Adaptive Tracking
- Up to 2.5 years battery life on daily reporting

**AssetView™**
The perfect blend of compact size and long battery life

- As small as a computer mouse
- Track anything from trucks to trailers to equipment
- Up to 12 months battery life on Adaptive Tracking
- Up to 3.5 years battery life on daily reporting

**AssetView™ Plus**
The ideal solution when maximum battery life is required

- Perfect for longer term deployments
- Magnetic tamper detection for removal alerting
- Up to 24 months battery life on Adaptive Tracking
- Up to 5 years battery life on 90 minute around the clock updates
- Up to 9 years battery life on daily reporting
- Doubles as a Bluetooth gateway to connect with Bluetooth tags

*Estimates based on Lithium batteries. Battery duration is affected by reporting rates, battery type, battery quality and temperature - may be different than published.*
Award Winning Technology
In Every Unit

IP67 Waterproof, Dustproof & Rugged
The housing is made of sturdy ABS/Polycarbonate plastic to survive the elements and is UV stabilised to survive many years in the sun, and temperature extremes.

It’s low-profile makes it easy to mount just about anywhere.

Wire Free Installation
Simply secure the device in place and begin tracking.

Adaptive Tracking
Adaptive-Tracking technology enables the accelerometer and GPS data to intelligently calculate if it is moving and to send frequent live updates, as well as to automatically scale the update rate down to once per day if the asset is stationary in order to preserve battery life.

Recovery Mode
You can change the AssetView settings over-the-air including switching to Recovery Mode for more frequent position updates.

3D Accelerometer
The 3 axis accelerometer allows the AssetView to ‘sleep’ in an ultra-low power state yet still wake-up when movement occurs. It can also detect extreme G-force events, such as assets being dropped or involved in accidents.

BYOB (Batteries)
Batteries are “off the shelf” standard Alkaline, Lithium or LTC - readily available at supermarkets, hardware stores and online. No need to stock or wait for proprietary batteries.

Keep Your Assets in View
Our intuitive web software is easy to use for tracking and reporting. Quickly setup alerts for geofence, curfew, low battery and movement. Switch to Recovery Mode and keep tabs on all your assets right from the app in the palm of your hand.

All devices use bank-level AES-256 device authentication and data encryption to ensure that your data is kept private and secure.
